Polling for /v1/codes/payments/{merchantPaymentId}

What should be the interval for Polling:
We recommend the merchant requests the API every 3 to 4 seconds, till the time the value of data.status changes from PAYMENT_NOT_MADE to COMPLETED

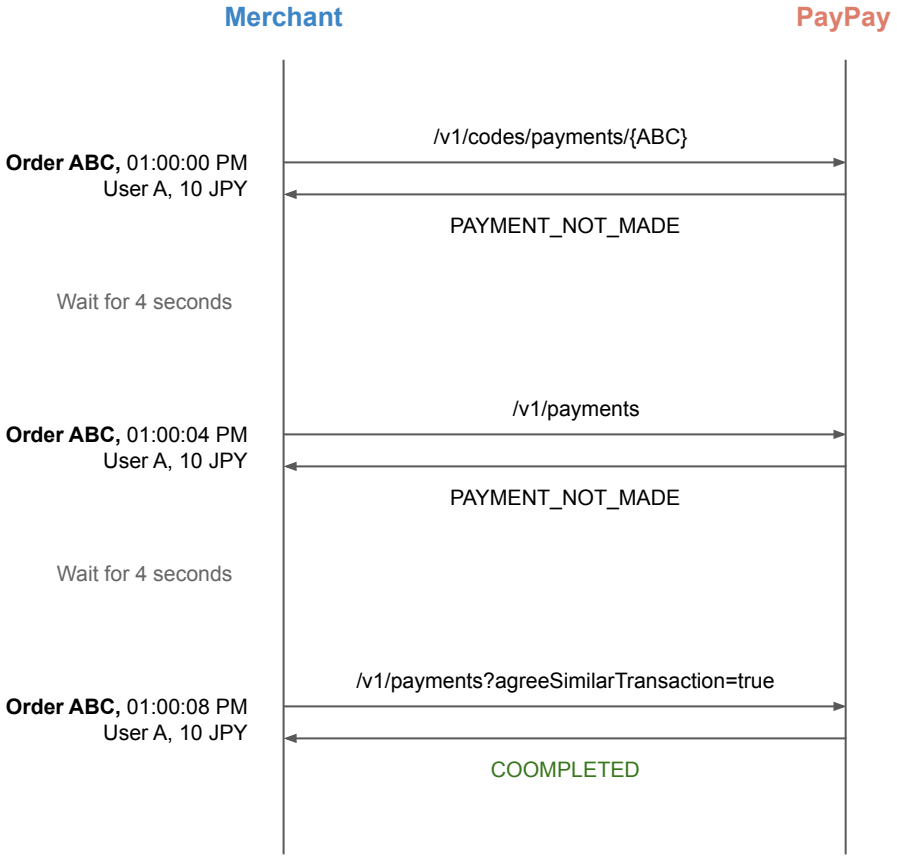
How will the api response changes:

Before customer has made Payment

- http status = 200
- resultInfo.code = SUCCESS
- data.status = PAYMENT_NOT_MADE

After customer has made Payment

- http status = 200
- resultInfo.code = SUCCESS
- data.status = COMPLETED



When to recreate a QR Code

- Ideally QR Code should be refreshed every time the screen opens and should be definitely refreshed once in 24 hours. Expiry time for a QR Code is 30 days
- In the UI please give users an option to refresh QR Code (recommended)
